

Training - Control System Maintenance

What happens when you have a Control System failure?

AND Automation training programs are focussed on being hands-on, site & system specific. If your on-site control systems are based on Rockwell Automation / Allen Bradley technologies, then you may be interested getting your maintenance team trained at our dedicated training facility in Nottingham.

AND Automation believes maximum plant efficiency and productivity can only be achieved once operators, support personnel and managers understand and appreciate their plant automation and control systems.

AND Automation offers a range of training modules tailored to site-specific needs, these include:

- Rockwell Automation Software Licence Activations
- Communicating with the PLC on Ethernet
- Rockwell Automation Website
- How to Flash Firmware
- Control System Backups
- Shutting Down RSView and starting Windows desktop
- Replacing a Processor
- ControlLogix Programming Languages
- ControlLogix System Fault Finding
- Changing an E3 Overload Relay
- Changing an PowerFlex Inverter Drive
- Changing an SMC Flex Soft Start
- Loading a PanelView Project
- Replacing a Servo Drive

AND Automation has a range of PLC and instrumentation training rigs for use during the training. The training rigs are of a modular design to enable the instructor to bring together the control system components that best reflect the clients' plant architecture. A PC workstation is provided for each delegate to work individually using the software packages available on their site.
